1. Claims 1-45 are allowed.
2. The following is an examiner's statement of reasons for allowance: an 8b/10b encoding system wherein an input running disparity ' is received and processed using 8-bit digital input that includes a 5-bit digital input portion and a 3-bit digital input portion. The processing continues by determining, in parallel, a 6-bit running disparity and a 4-bit running disparity. The processing then continues by determining a 6-bit digital output based on the 6-bit running disparity and the 5-bit digital input portion. The processing then continues by determining a 4-bit digital output based on the 4-bit running disparity and the 3-bit digital input portion. The resulting 10-bit encoded digital output is the combination of the 6-bit digital output and the 4-bit digital output. This has not been shown in the prior art.

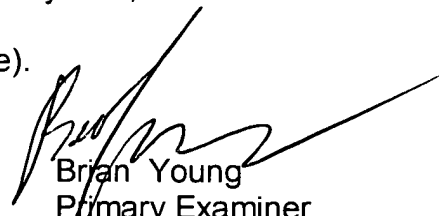

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Konno discloses an 8-bit data word to 15-bit codeword converter utilizing periodically varying digital sum variation a plurality of first codeword pairs each including a 15-bit codeword of which CDS is equal to +3 and a 15-bit codeword.
